1. Introduction

The "IAC-BOX Central Services" includes a set of functions for centralized management of distributed IAC-BOX systems. This way, administrators can remotely access the IAC-BOX WebAdmin interface via "MyAsteas Customer Center" and manage the system. The included Central Services functions are extended continuously. The IAC-BOX Central Services are available for software version 3.10 or newer.

	<p>To use the module „Central Services“, the port 1194 TCP/UDP must be opened for outgoing connections on the firewall.</p> <p>For the use of Central Services, the one-time activation of the license and valid Software Maintenance are required.</p>
---	---

2. Connection set up

Switch to the menu "Settings/Central Services" at the IAC-BOX WebAdmin Interface and activate the "Central Services" service to connect to the Central Server. If the license has not been activated for the use of Central Services, please contact the Asteas sales or support team.

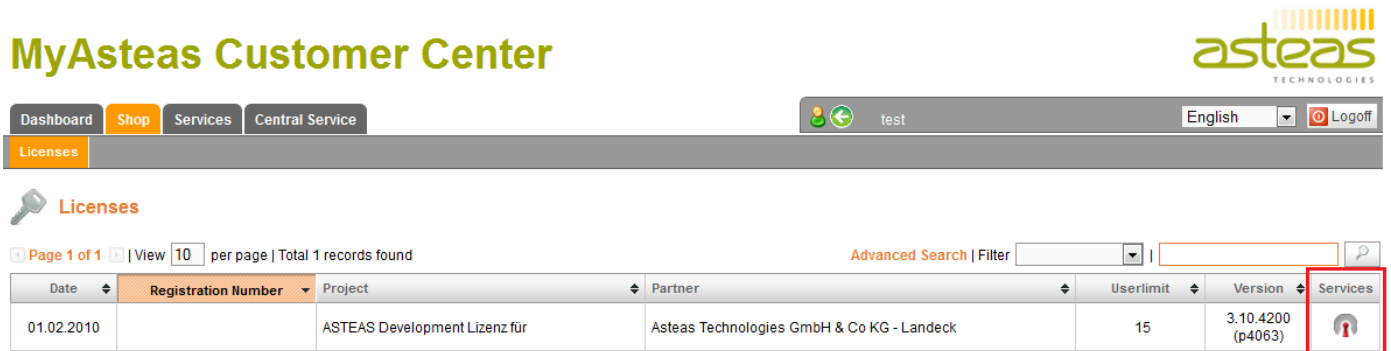

Central Services

Status:	<input checked="" type="checkbox"/>	Licensed	
Service:	<input checked="" type="checkbox"/>	Service running	<input type="button" value="Deactivate"/>
Central Server:	<input checked="" type="checkbox"/>	Connected (rc1.asteas.com:1194)	
Remote Access:	<input type="checkbox"/>		<input type="button" value="Activate"/>

As soon as the service has been started, a permanent VPN connection to the Central Server is made. The remote access via "MyAsteas Customer Center" is only allowed once the function "Remote Access" is activated.

3. Management

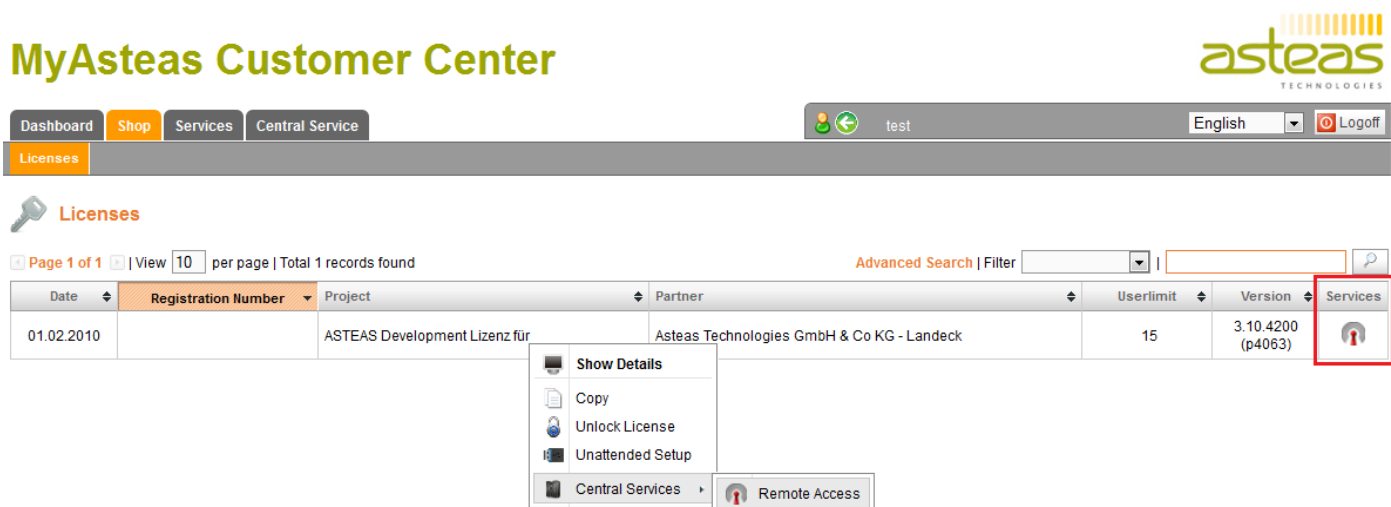

Log in to the MyAsteas Customer Center and switch to the menu “Shop/Licenses” to obtain a listing of all of your associated licenses.

The screenshot shows the MyAsteas Customer Center interface. At the top right is the 'asteas TECHNOLOGIES' logo. Below it is a navigation bar with tabs for 'Dashboard', 'Shop', 'Services', and 'Central Service'. The 'Shop' tab is active. In the top right corner, there is a user profile 'test', a language dropdown set to 'English', and a 'Logoff' button. Below the navigation bar, the 'Licenses' section is highlighted. A table lists licenses with columns: Date, Registration Number, Project, Partner, Userlimit, Version, and Services. The first row shows a license from 01.02.2010 for 'ASTEAS Development Lizenz für' at 'Asteas Technologies GmbH & Co KG - Landeck' with a user limit of 15 and version 3.10.4200 (p4063). A red box highlights the 'Services' column, which contains a grey person icon.

Date	Registration Number	Project	Partner	Userlimit	Version	Services
01.02.2010		ASTEAS Development Lizenz für	Asteas Technologies GmbH & Co KG - Landeck	15	3.10.4200 (p4063)	

For licenses with activated Central Services, the appropriate icon can be found in the services column. A grey icon means that either there is no connection to the Central Server or the Software Maintenance for that license is expired. However, a colored icon shows that the connection to the Central Server is up, and the IAC-BOX can be accessed remotely.

This screenshot is similar to the previous one but shows a context menu open over the 'Services' column of the license table. The menu options are: 'Show Details', 'Copy', 'Unlock License', 'Unattended Setup', 'Central Services', and 'Remote Access'. The 'Remote Access' option is highlighted with a red box, indicating it is the next step in the process.

Now right click on the license and then click on “Remote Access”. A new browser window opens and you will be connected directly to the WebAdmin interface of the corresponding IAC-BOX.

Welcome to WebAdmin

Please enter Username and Password.

 Username:

Password:

Language: ▼

Note: Cookies and JavaScript must be enabled.

Now you can manage the IAC-BOX System using the WebAdmin interface as usual.
